

Test plan

Project Information

Project Name: Manual Testing of ChatGPT Web Application

Application Under Test (AUT): ChatGPT Web Application

Prepared By: Humayra Siddika Maharun

Date: June 26, 2026

Version: 1.0

Objective

The objective of this testing project is to verify that the **ChatGPT web application** functions correctly, provides accurate usable responses, maintains conversation history properly and offers a consistent user experience across different scenarios. The testing will focus on functional, feature, exploratory and non-functional aspects of the application.

Scope

This project **focuses on** the manual testing of the **ChatGPT web application** to verify its core functionalities and overall user experience. The testing includes **authentication, prompt submission, AI response generation, conversation management** (create, open, rename and delete conversations), **input handling, settings, profile and theme features**. Feature testing will focus on the **Prompt Box** and **Conversation History** to ensure they function as expected. In addition, non-functional testing will be performed to evaluate the application's **responsiveness, accessibility, usability** and **basic performance** under slow internet conditions. Exploratory testing will also be conducted to identify **unexpected defects** and **usability issues**.

This project **does not include** API testing, database testing, source code review, AI model accuracy evaluation, payment or subscription features, security testing, automation testing, mobile application testing or load and stress testing.

Test Approach

Testing will be performed manually using **black-box testing** techniques. The following testing types will be conducted:

Functional Testing: Verify the behavior of the application's features.

Feature Testing: Validate Prompt Box and Conversation History functionality.

Exploratory Testing: Explore the application to identify defects omitted from scripted test cases.

Non-Functional Testing:

Responsive Testing - Verify application layout across different browser window sizes.

Accessibility Testing - Verify keyboard navigation and basic accessibility support.

Usability Testing - Verify user-friendly behavior such as loading indicators and error messages.

Performance Testing - Observe application behavior under slow internet conditions.

Test Environment

- **Application:** [ChatGPT Web](#)
- **Device Type:** Laptop
- **Operating System:** Windows 11
- **Browser:** Google Chrome (Latest Version)
- **Internet Connection:** Stable Broadband and Simulated Slow Network

Entry & Exit Criteria

Entry Criteria:

- Test environment is available.
- ChatGPT application is accessible.
- Test scenarios and test cases are prepared.
- Tester has required access permissions.

Exit Criteria:

- All planned test cases have been executed.
- Test results have been documented.
- Critical and high-severity defects have been reported.
- Exploratory testing session has been completed.
- Test summary report has been prepared.

Test Schedule

Phase	Activity	Start Date	End Date
Test planning	Creates a testing strategy and plan	26-06-2026	26-06-2026
Test case development	Writes detailed test cases and test scripts base on the planning	27-06-2026	28-06-2026
Test environment setup and test execution	Executing the prepared test cases in the test environment	29-06-2026	30-06-2026
Exploratory Testing	Explore the system and create an exploratory report	01-07-2026	01-07-2026
Defect Tracking	Creates a bug report	02-07-2026	02-07-2026
Test cycle closure	Preparing the test summary report	03-07-2026	03-07-2026

Risks and Assumptions

Risks

- Application behavior may change due to product updates during testing.
- Network instability may affect response times.
- Some defects may not be reproducible consistently.

Assumptions

- ChatGPT service remains available during testing.
- Tester has access to a valid ChatGPT account.
- Browser supports all required application features.

Deliverables

The following documents will be produced:

- Test Plan
- Test Scenarios
- Test Cases and Test Execution Report
- Exploratory Testing Report
- Bug Reports
- Test Summary Report
