

Test Summary Report

Project Information

Project Name: Manual Testing of ChatGPT Web Application

Application Under Test (AUT): [ChatGPT Web Application](#)

Test execution environment: Windows 11, Google Chrome

Tested By: Humayra Siddika Maharun

Date: July 3, 2026

Test Scope

The testing included Authentication, Core AI Features, Conversation Management, Input Handling, Settings, Profile, Theme, Response Controls, Prompt Box Testing, Conversation History Testing, Responsive Testing, Accessibility Testing, Usability Testing and Performance Testing under slow internet conditions.

Test Execution Summary

Metric	Result	Rate
Total Test Scenarios	12	--
Total Test Cases	40	--
Executed Test Cases	40	100%
Passed	36	90%
Failed	4	10%
Blocked	0	0%

Defect Summary

Severity Level	Number of Bugs
High	2
Medium	1
Low	1

Testing Challenges

- AI responses varied for the same prompt, making exact result verification difficult.
- Slow internet conditions affected response time and loading behavior.
- Minor UI or feature updates during testing could impact expected behavior.
- Some non-functional tests depended on browser and network conditions.

Conclusion

The ChatGPT web application performed well during testing, with most features working as expected. A total of **40** test cases were executed with **36** passing and **4** failing. The reported defects were mainly related to usability, accessibility and performance. Overall, the application is stable and suitable for normal use with regression testing recommended after fixing the identified defects.
